“Customer Focused, Environmentally Committed Since 1984”

Parking Lots

Reduce Your Maintenance Costs with Pavement Preservation!

Parking lot maintenance is a major cost that is required to keep the property aesthetically pleasing and appealing to your clients. Keeping cost at a minimum is key. Tired of paving your parking lot every few years? Tired of the same old cracks and pot holes resurfacing a few years after you have paved? Stop sinking endless money into your parking lot! Landsaver has multiple products to waterproof and reinforce your asphalt. For additional information or to speak with an engineer, contact us at 800-588-9223.

Landsaver Environmental:

- Installing paving fabric since 1988.
- Based in Virginia and cover the entire southeast.
- Day, night and weekend work.
- Engineering and site recommendations available.

Benefits of using paving fabric:

- Allows the option to build up your asphalt, instead of a mill and fill, which will make your parking lot stronger. A mill and fill operation adds no strength to your parking lot.
- Keeps water out of the base to increase the strength of the soil.
- Paving fabric is a proven engineered product that has been in use in the Mid-Atlantic states since the 1970's.
- Reduces reflective cracking to keep your asphalt looking new.
- 50% elongation to stretch and bridge over cracks below.
- Improves rideability and improves client happiness.
- Additional products available to reinforce the asphalt and can reduce or eliminate the need for a full reconstruction.
- State and USDOT approved.

Other applications include roads, bridges, and airports.

AASHTO M-288-Paving Fabric

Property	Test Method	Typical MARV
Grab Strength	ASTM D4632	101 lbs
Ultimate Elongation	ASTM D4632	50%
Mass per unit area	ASTM D5261	4.1 oz/yd ²
Asphalt Retention	ASTM D 6140	0.20 gal/yd ²
Melting Point	ASTM D276	320°F

Made in USA

Containment

Installation Services:

- Impermeable liners for landfills, lagoons, ponds, basins, aquaculture
- GCL Liner
- Secondary Fuel Spill Containment
- Rain Covers, Energy
- Concrete Protective Liners
- On-site installation

Erosion Control

Porous Paving

Porous paving products are used to prevent turf damage in traffic applications such as emergency access lanes, overflow parking lots, golf cart paths and high traffic pedestrian areas, while allowing water to drain through the surface to reduce the volume of stormwater runoff. Many products to meet the needs of your project.

Triple S Hydroseeding

A special blend of seed, fertilizer, lime and mulch that is designed for your individual application. Triple-S consistently works better than any system you have seen before.

- Triple S Temporary - for temporary seeding applications
- Triple S Permanent - for permanent seeding applications
- Triple S FGM - for Sod similar results
- Triple S Vertical - for vertical or near vertical applications like retaining walls

Patterned Pavement

Patterned Pavement products are a hot applied synthetic asphalt material that bonds permanently to the surface. If you want the look of brick paving, but want it to last many years without any maintenance, then Patterned Pavement is the solution.

- Minimal traffic disruption
- Extremely durable with the authentic look and feel of pavers
- Quick Installation
- Can be applied on concrete or asphalt
