# What Type of Triple S is Right For You?

## TRIPLE S Type 3

Need Sod-Quality results on a budget? Triple S Type 3 is what you need. We've spent years perfecting this blend of materials to deliver results nearly indistinguishable from sod at a fraction of the price.

Ideal for commercial landscapes, residential lawns and other high profile projects, Type 3 is an ultra-thick application of blended materials designed to retain water and nourish the professional quality seed included in the mix. We adjust the soil amendments to meet the needs of your site before every application, making Type 3 an excellent choice in virtually any soil condition.

You'll want to water the seed just like you would sod to encourage germination and deep rooting of the grass.

*Triple S Type 3 applied to a residential landscape saves 40-50% vs sod.*

- High Profile Projects
- Sod-Quality Results
- Flat Areas and Steep Slopes
- Retains MORE Water
- Increase Seed Germination
- Includes Polymers to Reduce Erosion
- Sets up faster than Traditional Hydroseed
- Mix Includes:
  - Seed
  - Fertilizer
  - Polymers
  - Anti-Erosion Fibers
  - Fertilizers
  - Lime

*Triple S Type 3 turns into sod - just add water.*

## TRIPLE S Type 2

This blend of materials is designed to establish a high-quality turf in a cost-effective manner. It is similar to the Type 3 blend, but is applied more conservatively to reduce costs. Some of the anti-erosion components of the Type 3 blend are also removed, making it less suitable to handle sloped applications. But for flat areas that require professional quality results, there's no better or more cost-effective way to achieve your goals than with Landsaver's Triple S Type 2.

- High Profile Projects
- Professional-Quality Results
- Ideal for Flat or Near-Flat areas
- Requires More Water than Type 3 for Germination
- Mix Includes:
  - Seed
  - Tackifier
  - Fertilizer
  - Lime

*For even greater savings vs sod, try Triple S Type 2 on flat landscapes.*

## TRIPLE S Type 1

Type 1 is our entry-level hydroseed blend, but is still better than a typical paper mulch application. Type 1 includes a high quality wood-fiber mulch, tackifier, and seed to meet your needs. This isn't what you'd want in your home's front yard, but it works great to establish basic vegetation and close out a project.

- Available for both TEMPORARY and PERMANENT applications
- Low Profile Projects
- Requires More Water for Germination
- Mix Includes:
  - Seed
  - Wood-Fiber Mulch
  - Tackifier
  - Fertilizer
  - Lime

*Get your commercial and industrial projects done right the first time with a quality application.*
